

Cloud Forensic Investigation Report

Report ID: FOR-INC-AZ-2026-BF09 | Classification: RESTRICTED (TLP:AMBER) | Date: 2026-09-18 07:39:40 UTC

1. Executive Summary & Dynamic Risk Evaluation

Incident ID:	INC-AZ-2026-BF09	Target Resource:	Microsoft Entra ID Tenant (de2e9cb3-5195-4b45-be88-8b4d9e53dcf3)
Sentinel Static Severity:	Medium	ML Dynamic Risk Score:	89.4/100 (CRITICAL)
Compromised Identity:	admin.backup@tenant.onmicrosoft.com	Threat Origin IP:	185.220.101.42 (TOR Exit Node / Netherlands)

Forensic Finding: The Sentinel rule originally assigned a static severity of **Medium**. Deep cloud evidence bundling identified critical risk flags that elevated the dynamic score to **89.4/100 (Critical)**.

2. Primary Machine Learning Risk Drivers

Risk Driver Feature	Impact %	Forensic Explanation
High-Frequency Authentication Failures	34.2%	1,420 failed sign-in attempts within a 4-minute window (AADSTS50126)
Privileged Identity Target	26.5%	Target identity holds Global Reader and scoped Key Vault Contributor roles
Anomalous Geo & Infrastructure	18.7%	Source IP classified as known TOR relay with high-risk IP reputation index (0.94)
Conditional Access Bypass Attempt	10.0%	Sign-in attempted using legacy authentication protocol (ROPC / ActiveSync)

3. Bundled Cloud Evidence Audit

Evidence Vector	Property Inspected	Finding Status
Identity / IAM	Recent Role Elevation	Normal
Identity / IAM	MFA / Conditional Access	Enforced
Storage Security	Blob Public Access Enabled	Private
Compute / IMDS	Managed Identity IMDS Token	Clean
Network Security	Inbound NSG Open Port (0.0.0.0/0)	Protected
Data Egress	Data Volume Exfiltrated	0 MB

4. Chronological Attack Timeline

Timestamp	Event & Source	Description
04:30:12 UTC	None (Azure)	Initial password spray initiated from IP 194.26.29.114 targeting 50 domain accounts.
04:31:45 UTC	None (Azure)	Attacker switches source IP to 185.220.101.42 (TOR Exit Node).
04:33:02 UTC	None (Azure)	High-volume dictionary attack focused on admin.backup@tenant.onmicrosoft.com.
04:34:15 UTC	None (Azure)	Microsoft Sentinel Rule: High failed sign-in rate triggers Incident #28491.

04:34:18 UTC	None (Azure)	Sentinel Logic App fires automated webhook to Cloud Forensic API.
04:34:20 UTC	None (Azure)	ML Engine dynamic severity model recalibrates score to 89.4 / 100 (CRITICAL).
04:34:22 UTC	None (Azure)	Entra Smart Lockout engages; account authentication locked for 60 seconds.

5. Recommended Azure CLI Remediation Commands

```
$ az ad user update --id compromised-user@corp.com --account-enabled false
$ az storage account update --name targetstorage --allow-blob-public-access false
$ az network nsg rule create -g ProdRG --nsg-name ProdNSG -n BlockThreat --priority 100
--source-address-prefixes 198.51.100.74 --access Deny
```
